FundFlow — How Your Money Works

Member one-pager · Print or share as a single slide

Your two balances

Balance	What it means for you
Cash	Money available in your account right now — used for contributions, loan repayments, and cash-outs
Fund	Your equity in the pool — built from contributions and loan repayments; reduced when you take a loan

Cash and fund are related but not the same. Paying a contribution **moves** money from cash into fund.

Money coming in

1. You transfer money to the fund's bank account.
2. The admin records the deposit (or matches it from a bank statement).
3. Your **cash balance goes up**.

You may see cash collected automatically for an open monthly contribution or loan installment when it arrives.

Monthly contributions

Each cycle you owe a fixed contribution amount.

- If you have enough **cash**, it is collected automatically.
- Collected cash becomes **fund** — your share of the pool grows.
- If cash is short, the remainder stays pending or overdue (late fees may apply).

Taking a loan

1. You request a loan; a guarantor is required.
2. When approved and disbursed, the loan amount is **credited to your cash**.
3. Your **fund** is debited (your portion + the pool's portion).
4. To receive money in your personal bank account, submit a **cash-out request**.
5. After admin approval, cash is debited and the bank transfer is processed.

Important: Disbursement adds cash to your account in the system first. The actual bank transfer is a separate cash-out step.

Paying back a loan

Repayments are collected from your **cash** (after a payment is recorded).

- Cash is debited for the installment.

- Your **fund** is credited.
- The loan balance decreases.

The loan is fully closed when the pool's share plus any settlement threshold has been repaid.

Special case: If the entire loan was funded from your own fund only (no pool share), there may be no ongoing installments — the loan can be closed at disbursement.

Cash-out (withdrawal)

1. You request a cash-out from your available **cash** balance.
2. Admin approves.
3. Cash is debited; the transfer is sent to your bank.
4. The transaction is later matched to the bank statement.

You cannot cash out fund directly — only cash.

Quick reference

```
Pay in     →  Cash ↑
Contribute →  Cash ↓  Fund ↑
Get loan   →  Fund ↓  Cash ↑  (then cash-out for bank)
Repay loan →  Cash ↓  Fund ↑
Withdraw   →  Cash ↓  (to your bank)
```
