

FundFlow — Admin Operations Guide (Fund Flow)

One page · For tenant administrators

System overview

Every member action that touches cash or fund must keep **master and member pools in sync**. Nightly reconciliation checks this.

Money in — two admin paths

Path	When to use	Your steps
A — Fund posting	Member reported a deposit	Fund Postings → Accept → later Clear/Match to bank CSV
B — Bank first	You have the statement CSV	Import → Mirror to cash → Post to member

Rule: Do not double-count the same deposit (manual bank credit + import for the same money).

Collection cycle (monthly)

Phase	Admin action
Open cycle	Contributions created; members notified
Collection window	Auto-debit runs when member cash increases
After due date	Late fees; delinquency flags
Close	Reconcile exceptions

On collection: Member cash ↓, master cash ↓ (mirror), member fund ↑, master fund ↑ (mirror).

Deposits trigger **immediate re-collection** if a contribution or EMI is outstanding.

Loans & cash-outs

Disbursement (your approve action)

Step	Ledger effect
Disburse loan	Fund debited (member + pool portions); cash credited to member
Member cashes out	Separate step — not automatic at disbursement

Cash-out (your accept action)

Figure 1: Diagram 1

Figure 2: Diagram 2

Step	Ledger effect
Accept cash-out	Member + master cash debited ; uncleared bank line created
Clear/match later	Link to imported bank debit — no extra ledger entries

Figure 3: Diagram 3

Loan repayments

Imported or live payments: **credit cash (mirror in)** → **debit cash (collection)** → **credit fund** → **credit loan account**.

Schedule sync runs after bulk legacy imports. Fully **member-fund** loans (no pool slice) complete with **no EMI schedule**.

Admin checklist by function

Task	Cash	Fund	Bank
Accept deposit	CR member + master	—	Uncleared → match
Import & mirror	CR master cash	—	CR master bank
Post to member	CR member	—	—
Contribution collected	DR member + master	CR member + master	—
Disburse loan	CR member + master	DR member + master	—
Accept cash-out	DR member + master	—	Uncleared → match
Post repayment	CR/DR pair on cash	CR member + master	—

Reconciliation signals

Exception	Meaning	Typical fix
Master cash pool drift	Master cash sum of member cash	Rebuild balances; check unpaired legs
Master fund pool drift	Master fund sum of member fund	Same
Uncleared bank lines	Ledger intent without bank proof 3	Import CSV and clear/match
Pending past window	Contribution still uncollected after due	Follow up with member

Slide outline (presentation)

1. **Title** — Admin fund flow in FundFlow
2. **Two pools** — Cash and fund; master = sum of members
3. **Deposits** — Path A vs Path B
4. **Collection** — Cycle phases and auto-debit
5. **Loans** — Disburse → cash → cash-out → clear
6. **Repayments** — Import and schedule sync
7. **Reconciliation** — What to watch and fix
8. **Do / Don't** — No double-counting; clearance new ledger
