

FundFlow — How Your Money Works (Member Guide)

One page · For members

Your two balances

Balance	What it means
Cash	Money available in your account right now — used for contributions, loan payments, and withdrawals
Fund	Your equity stake in the pool — built from contributions and loan repayments; used when you borrow

Think of **cash** as your wallet and **fund** as your savings in the cooperative.

Money coming in

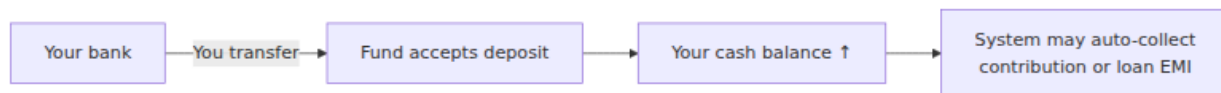

Figure 1: Diagram 1

1. You transfer money to the fund's bank account.
2. Admin accepts your deposit (or it is posted from a bank import).
3. Your **cash balance** increases.
4. The system may immediately apply cash to your **monthly contribution** or **loan installment** if due.

Monthly contribution

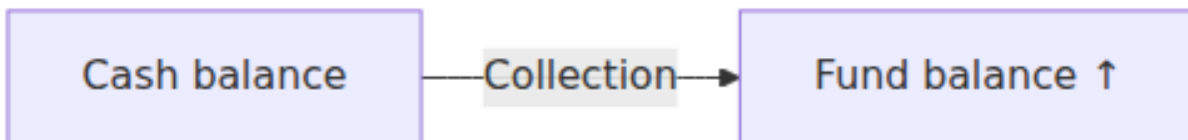

Figure 2: Diagram 2

When your contribution is collected, cash moves into your **fund balance**. That is your share of the pool's total value.

If you do not have enough cash, the contribution stays **pending** or **overdue** until more money arrives.

Taking a loan

- Borrowing uses part of your **fund** and part of the **shared pool** (split depends on your loan).
- The loan amount appears in your **cash** first — it is not sent to your bank automatically.

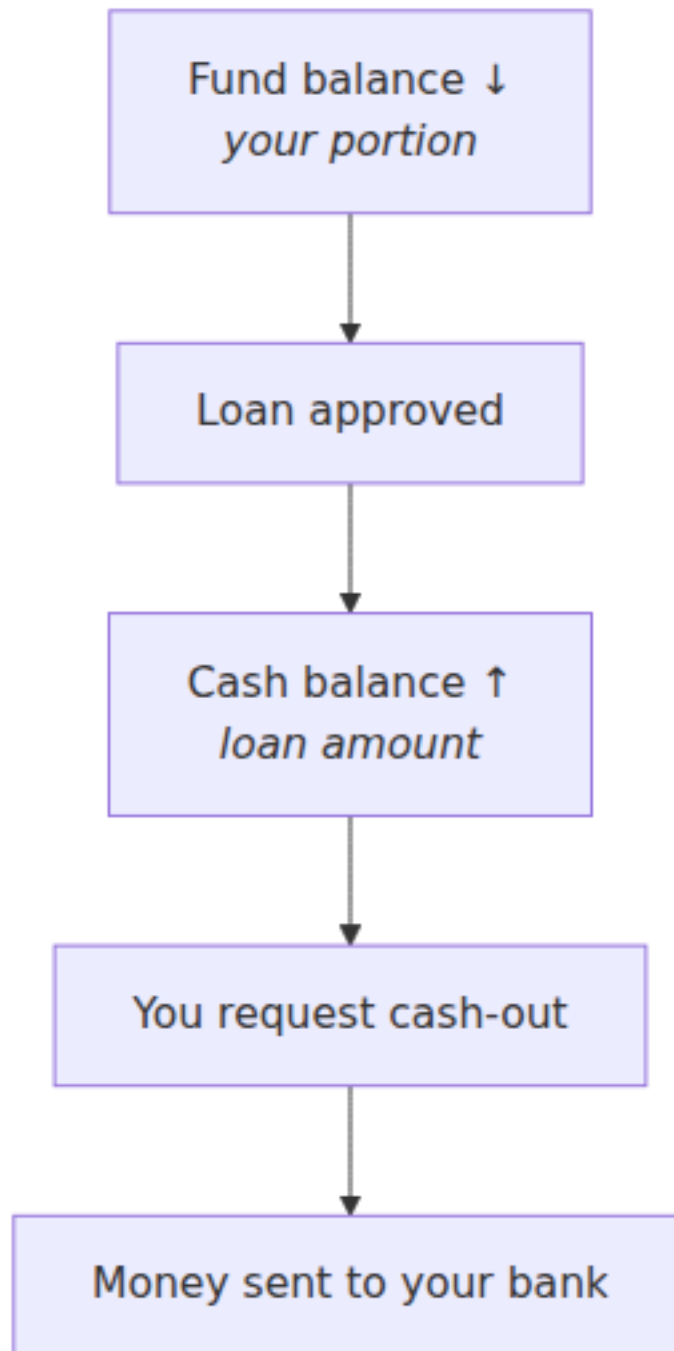

Figure 3: Diagram 3

- You submit a **cash-out request**; after admin approval, money is transferred to your bank.

Paying back a loan

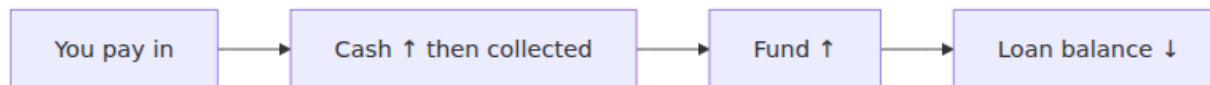

Figure 4: Diagram 4

Payments (deposits) are credited to cash, then applied to loan installments. You repay the **pool's share** of the loan plus any settlement amount — not your own fund equity that was used at disbursement.

When fully repaid, your loan is marked **completed** and your guarantor may be released.

Quick answers

Question	Answer
Why is my cash 0 after I paid in?	It may have been collected for contribution or a loan installment
Why is my fund negative?	You have an active loan; fund was debited at disbursement
When do I get loan money in my bank?	After you request and admin approves a cash-out
Can I withdraw fund balance directly?	No — only cash can be cashed out

Slide outline (presentation)

1. **Title** — How your money moves in FundFlow
2. **Two balances** — Cash vs fund (wallet vs equity)
3. **Deposits** — Bank → your cash
4. **Contributions** — Cash → fund
5. **Loans** — Fund → cash → your bank (via cash-out)
6. **Repayments** — Pay in → cash → fund → loan paid down
7. **FAQ** — Common member questions
