

Loan repayment operations

Where to post or apply loan repayments for one member, and how to run repayment collection for all members in the tenant admin panel and scheduled jobs.

One member (admin)

Primary action: Apply open-period repayment

Cycle windows: Each period runs from **cycle start day** (default **6th**) through the **day before** the next cycle start (e.g. **February** = 6 Feb – 5 Mar inclusive). An EMI due **5 Mar** belongs to the **February** cycle when the business date is in February.

Use this on any **active** loan that has an unpaid EMI in the **open period window**:

Location	Path
Loans list	Fund Management → Loans → Loans (Portfolio tab) — row actions (menu)
Loan queue	Fund Management → Loans → Loan queue — same row actions when the loan is active
Loan detail	Open the loan (View / edit) — header actions include the same workflow actions

This action debits the member's **cash** for the **current open period** EMI (plus late fee if applicable), via `LoanRepaymentService::applyOpenPeriodRepaymentForMember()`.

Related actions (same menus)

Action	Purpose
Early settle	Pay all remaining installments from member cash
Partial early settle	Pay a lump sum and roll up or skip future installments

Repayment history (read-only)

Location	Shows
Members → [member] → Repayments	Paid installments across loans
Loans → [loan] → Repayment schedule	Installment list for that loan (no “post payment” action on this tab)

All members (EMI collection workspace)

Fund Management → **Loans** → **Loans** — **EMI collection** tab (first tab; **EMI collected** for posted installments). Default tab when opening the list is **Loans** (portfolio).

Mirrors **Contributions** → **To collect**:

Tab	Purpose
EMI collection	Members with pending EMIs through the open period (and arrears). Row Apply now or bulk Apply now debits cash via <code>LoanInstallmentCollectionService</code> .
EMI collected	Installments already paid (due through the open period).

Eligibility reviews is the last tab on the same Loans list (no separate cluster item).

All members (scheduled batch)

There is still **no** requirement to use the UI for month-end batch runs — the scheduled job below remains available.

Batch repayment is done via **scheduled commands**, runnable from the admin UI or CLI.

Admin UI

System → **Jobs & commands** — run `loans:apply-repayments` (“Apply loan repayments”).

- Applies the scheduled EMI for **all active loans** for the open period.
- Optional period override on CLI: `--month=` and `--year=`.

Production schedule

From `routes/console.php`:

Command	Schedule	Role
<code>loans:apply-repayments</code>	Monthly, 6th , 06:00	Batch EMI collection from member cash for the period
<code>loans:close-emi-window</code>	Monthly, 6th , 00:45	Marks unpaid installments overdue (does not debit cash)
<code>contributions:apply</code>	Monthly, 5th , 09:00	Posts contributions for all members; collection cycle may then settle loan EMIs from cash

CLI

```
php artisan loans:apply-repayments
php artisan loans:apply-repayments --month=6 --year=2026
```

Batch posting is blocked when reconciliation has halted batch operations (see **Jobs & commands** banner and **Reconciliation queue**).

Automatic collection (incremental)

EMIs are also collected when **member cash increases**, without a separate “Run EMI collection” button.

`LoanInstallmentCollectionService` collects installments in **open collection** states for the **open period and arrears** (not future installments). This is triggered after events such as:

- Accepted **deposits**
- **Contributions** → **To collect** → **Apply now** (single or bulk)
- Manual **cash credits** on member accounts

Setting: auto-allocate after contribution

Settings → **Loans** → “Auto-allocate posted contributions to loan”

When enabled, after a contribution is posted, the app attempts open-period loan repayment from member cash when possible (`LoanRepaymentService` / collection cycle).

Member self-service

Member portal → **My loans** — **Pay open-period repayment**

Same economic effect as admin **Apply open-period repayment** for that member’s active loan.

Quick reference

Goal	Where
Post one member’s current EMI	Loans or Loan queue → Apply open-period repayment
Pay off a loan early	Same places → Early settle (or partial early settle)
Collect pending EMIs for all members (UI)	Loans → EMI collection tab (bulk or per member)
Run EMI for all active loans (scheduled period)	System → Jobs & commands → loans:apply-repayments
Collect after cash is credited	Often automatic; or EMI collection / Contributions → To collect (+ optional auto-allocate setting)
View paid installments	Members → Repayments or Loans → Repayment schedule

Note: Contributions screens are for **membership contributions**, not a dedicated “collect all loan repayments” workspace. For all-member EMI posting, use **Jobs & commands** or **loans:apply-repayments**.

Implementation map

Layer	Class / command	Responsibility
Open-period (manual)	<code>LoanRepaymentService::applyOpenPeriodRepaymentForMember()</code>	Open period installment
Period batch	<code>LoanRepaymentService::applyRepayments()</code> / <code>loans:apply-repayments</code>	All active loans for a given month/year
Cash-driven EMI	<code>LoanInstallmentCollectionService</code>	Incremental collection when cash balance increases
Contribution cycle	<code>ContributionCollectionCycleService</code>	Household allocation; calls loan collection after contribution settlement
Filament actions	<code>LoanFilamentActions::applyOpenRepayment()</code>	Admin UI wiring on loans list, queue, and view
Member UI	<code>MemberLoanFilamentActions::payOpenPeriodRepayment()</code>	Member UI wiring
