

FundFlow Administrator — Operations Manual

This manual explains how fund **administrators** operate the tenant admin panel: members, collections, loans, bank clearing, deposits, cash-outs, reconciliation overview, settings, and system jobs.

Admin URL: <https://<your-fund-domain>/admin>

Sign in: Tenant admin account (**tenant guard**).

For fund-flow accounting rules, see [fund-flow-one-pager-admins.md](#) and [fund-flow-dynamics-admins.md](#).
For reconciliation and the daily/monthly scheduler, see [fund-flow-reconciliation-and-scheduler.md](#).

Table of contents

1. [Admin panel layout](#)
2. [Daily operations checklist](#)
3. [Members](#)
4. [Collections \(contributions\)](#)
5. [Loans](#)
6. [Disbursements](#)
7. [Deposits \(fund postings\)](#)
8. [Cash-out requests](#)
9. [Bank clearing](#)
10. [Reconciliation overview](#)
11. [Reports](#)
12. [Membership applications and member requests](#)
13. [Messages and support](#)
14. [Settings](#)
15. [Audit & System hub](#)
16. [Scheduled jobs](#)
17. [Legacy migration](#)
18. [Operational rules administrators must respect](#)
19. [Monthly calendar](#)

1. Admin panel layout

The sidebar is grouped into three areas:

Group	Items
Operations	Members, Loans (cluster), Collections, Disbursements
Finance	Bank clearing, SMS clearing, <i>Reconciliation</i> , Reports
System	Audit & System, Settings

*Shown when the feature is enabled for the tenant.

Dashboard (/admin) — KPIs, pool health, collection gauge, loan queue preview, shortcuts into workflows below.

Top bar: Current contribution cycle chip, messages inbox (admins), language switch.

Many workflows are **not** on the sidebar but reachable from the dashboard, member workspace, or Audit & System hub (deposits, cash-outs, applications, accounts, jobs).

2. Daily operations checklist

Task	Where	Notes
Review pending deposits	Fund postings or dashboard	Accept/reject member deposits
Review pending cash-outs	Cash-out requests	Accept triggers cash debit + uncleared bank line
Bank work queue	Finance → Bank clearing	Match imports to operational lines
Loan queue	Loans → Loan queue	Approve/reject applications
Reconciliation badge	Finance → Reconciliation	Open exceptions if any
Messages	Top bar inbox	Member communications

Morning (automated): The system runs scheduled jobs per tenant (invariants, reconciliation batch, late fees, bank auto-match). If **batch posting is halted**, halt-sensitive jobs are blocked until critical reconciliation issues are resolved.

3. Members

Menu: Operations → **Members** → /admin/members

List tabs

Filter by status: active, inactive, migration_pending, delinquent, suspended, withdrawn, terminated.

Member workspace (view member)

From a member record, use tabs and relation managers:

Area	Use for
Loans	Member's loan history
Contributions	Collection history and arrears
Transactions	Cash / fund / loan ledger
Accounts	Account balances
Repayments	Imported/legacy repayment rows
Dependents	Household structure
Guarantor exposure	Loans guaranteed
Messages	Direct messaging

Creating and editing members

- **Create member** — manual onboarding or post-migration.
- **Edit** — status changes follow [member-status-spec.md](#); do not use ad-hoc status dropdowns where policy applies freeze/unfreeze flows.

Member requests

URL: /admin/member-requests — freeze, unfreeze, withdrawal, and other formal requests.

4. Collections (contributions)

Menu: Operations → **Collections** → /admin/contributions

Tabs

Tab	Purpose
Contributions	Full ledger of posted contributions
To collect	Open cycle — members still owing
Collected	Posted this period
Arrears	Overdue / partial

Collection mechanics

When a contribution is collected:

1. **DR** member cash + **DR** master cash (mirror)
2. **CR** member fund + **CR** master fund (mirror)

Collection may happen:

- On **cycle apply** job (monthly schedule)
- When **member applies** from portal
- When **cash increases** (deposit accept, import) via auto-collection

See [collection_cycle_workflow.md](#).

Manual contribution entry

Use **Create** on Collections for manual adjustments (follow fund policy; may affect reconciliation).

Late fees

Applied by scheduled job `contributions:apply-late-fees` (daily) after grace window. Tier rules are in Settings → Collection.

5. Loans

Menu: Operations → **Loans** (cluster)

Loan queue

Loans → **Loan queue** — pending applications and approvals.

Actions: approve, reject, adjust amount, set funding split, grace cycles.

Loan list tabs

EMI to collect, EMI collected, portfolio, overdue installments, guarantor exposure, eligibility reviews.

Loan detail

Relation manager	Purpose
Installments	Schedule, mark paid, overdue
Disbursements	Tranche history

Relation manager	Purpose
Repayments	Imported/legacy manual repayment rows
Early settle	Header action on active loans

Loan lifecycle (admin view)

Application → Approval → Disbursement (ledger) → Active/repaying → Completed

Disbursement posts ledger only — it does not pay the bank. Member receives **cash credit**; bank payout is separate (cash-out or external process).

Repayment: Cash-in mirror → cash debit → fund credit → loan principal credit.

See [loan-repayment-operations.md](#) and [loan-delinquency-workflow.md](#).

6. Disbursements

Menu: Operations → **Disbursements** → /admin/disbursements

Post **approved loan tranches** to the ledger:

- DR member fund + master fund (portions)
- DR loan account (principal)
- CR member cash + master cash (mirror)

Tabs: pending, partial, complete.

7. Deposits (fund postings)

URL: /admin/fund-postings (dashboard / member links)

Status	Admin action
Pending	Accept or reject
Accepted	CR master cash + CR member cash; uncleared bank line created

Accept may trigger auto-collection for open contributions or EMIs.

Do not also import the same deposit via bank CSV without matching — risk of double-counting. Choose **Path A** (posting first) or **Path B** (bank import first) per [fund-flow-one-pager-admins.md](#).

8. Cash-out requests

URL: /admin/cash-out-requests

Step	Result
Member submits	Pending
Admin accepts	DR member cash + DR master cash; uncleared bank payout line

Step	Result
Bank transfer done	Clear/match on bank clearing when line appears on statement
Admin rejects	No ledger movement; member sees remarks

9. Bank clearing

Menu: Finance → **Bank clearing** → /admin/bank-accounts

Tabs

Tab	Purpose
Work queue	Lines needing action (all / from bank file / from operations)
Bank ledger	Master bank transaction history
Import history	Past CSV batches and closed lines

Typical workflow

Import bank CSV → Mirror to cash (if needed) → Post to member (if unallocated)
→ Match operational uncleared lines → Clear

Queue actions

Action	When to use
Mirror to cash	Statement line should increase master cash
Match / Auto-match	Link import line to uncleared deposit or cash-out
Clear without evidence	Operational clearance per policy
Ignore	Dismiss non-actionable queue row

Rule: Clearance **links** bank evidence to ledger intent — it should **not** post duplicate cash/fund legs when matched correctly.

Scheduled: `bank:auto-match` daily at 08:00 (per tenant).

10. Reconciliation overview

Menu: Finance → **Reconciliation** → /admin/reconciliation

Tab	Purpose
Overview	Summary, shortcuts
Queue	Open reconciliation exceptions
History	Resolved exceptions
Snapshots	Stored audit reports
Methodology	In-product reference

Header actions

Action	Equivalent
Run now	Realtime snapshot
Nightly batch	Full exception sweep
Daily / Monthly snapshot	Historical audit store

Administrators review and assign exceptions; **accountants** typically diagnose and post corrections (see [manual-accountant.md](#)).

If **batch posting is halted**, contribution apply, EMI apply, and similar jobs are blocked until critical master imbalance is resolved.

11. Reports

Menu: Finance → **Reports** → /admin/reports

Export collections, loan portfolio, reconciliation PDF, audit log, guarantor exposure (CSV/XLSX/PDF).

Shortcut cards link to live workspaces.

12. Membership applications and member requests

Resource	URL	Purpose
Membership applications	/admin/membership-applications	New member onboarding wizard submissions
Member requests	/admin/member-requests	Freeze, withdraw, etc.

13. Messages and support

Resource	Purpose
Messages inbox (top bar)	Two-way messaging with members
Support requests	Formal tickets from Help & FAQ

14. Settings

Menu: System → **Settings** → /admin/settings

Tab	Configures
General	Fund name, currency, locale
Collection	Cycle dates, late fees, grace
Loans	Tiers, eligibility, grace cycles, delinquency
Fund tiers	Capacity tiers
Reconciliation	Tolerances, declared bank balance

Tab	Configures
Guarantor rules	Guarantor policy
Fiscal calendar	Business calendar
Public page	Marketing / join page
Statements	Statement generation rules
Communication / Notifications	Channels and templates
Bank / SMS templates	Import column mapping

Changes here affect scheduled jobs and member portal behaviour.

15. Audit & System hub

Menu: System → **Audit & System** → /admin/audit-system

Tab	Purpose
Audit log	Who did what (admin, recon, loans, overrides)
Notification log	Delivery history
Jobs	Scheduled commands + manual run
Maintenance	Backups, purge (admin only)
Migration	Legacy data import wizard
Year-end close	Fiscal close readiness and execution

16. Scheduled jobs

Accessible from **Audit & System** → **Jobs** or /admin/jobs.

Daily schedule (per tenant)

Time	Job	Purpose
06:00	Assert master invariants	Pool balance check
06:20	Daily reconciliation snapshot	Audit store
06:30	Nightly reconciliation	Exception queue
07:00	Loan defaults check	Delinquency
07:15	Apply late fees	Contribution + EMI fees
07:30	Delinquency digest	Admin email
08:00	Bank auto-match	Automatic matching

Monthly schedule (high level)

Day	Job
1st	Init contribution cycle, loan due notifications
5th	Apply contributions (batch)
6th	Apply loan repayments, close collection/EMI windows
3rd	Generate statements

Halt-sensitive jobs (blocked when reconciliation halts posting): contribution init/apply/close, EMI apply, late fees, bank auto-match.

Manual run: Select job → Run. Output and history stored in `SystemJobRun`.

17. Legacy migration

Audit & System → Migration (admin only)

Four-step wizard: members CSV → loans CSV → payments → classify/import.

Runs heavy imports via **queue jobs** (`RunLegacyMigrationPaymentsJob`, `ClassifyLegacyPaymentsJob`).

After migration, coordinate with your accountant for repair commands if drift appears. See [manual-accountant.md](#) § Legacy migration.

18. Operational rules administrators must respect

Master member mirrors

When posting member cash or fund movements that represent pool activity:

- **Credit member cash** → credit master cash (same transaction)
- **Debit member cash** → debit master cash
- **Credit member fund** → credit master fund first, then member fund
- **Debit member fund** → debit master fund first, then member fund

Do not pass `member_id` on master cash legs unless documented — it can trigger unexpected auto-collection.

Bank clearance is separate

Ledger posting records **intent**. Matching a bank line confirms evidence — not a second cash posting.

Loan disbursement vs bank payout

Disbursement credits member cash. Actual bank transfer is a separate cash-out or external process.

Do not combine Path A and Path B for the same money

See deposits section and fund-flow admin one-pager.

19. Monthly calendar

Typical month for a standard fund (exact dates in Settings → Collection):

Phase	Days	What happens
Cycle open	1st	Pending contributions created; notices sent
Collection window	1st – 5th	Members pay; batch apply on 5th
Window close	6th	Unpaid → overdue; EMI window closes
Late fees	After grace	Daily fee job applies tiers
Statements	3rd (next month)	Monthly statements generated

Between scheduled dates, **realtime auto-collection** runs when member cash increases.

Quick reference — where to go

I need to...	Go to...
Accept a deposit	Fund postings
Pay out a member	Cash-out requests → accept → bank clear
Import bank CSV	Bank clearing
Match bank to deposit	Bank clearing → Work queue
Approve a loan	Loans → Loan queue
Disburse approved loan	Disbursements
See who owes contribution	Collections → To collect
Fix a reconciliation flag	Reconciliation → Queue (or escalate to accountant)
Change contribution due date	Settings → Collection
Run jobs manually	Audit & System → Jobs
Import legacy data	Audit & System → Migration
