

FundFlow — Reconciliation & Scheduler

Administrator one-pager · Print or use as a 5-slide deck

Full reference: [fund-flow-reconciliation-and-scheduler.md](#)

Slide 1 — What runs automatically

FundFlow runs scheduled commands **every day per tenant** (your fund's database). You do not need to start these manually unless troubleshooting.

Time	What happens	Admin action usually needed?
06:00–06:30	Pool checks + reconciliation sweep	Only if exceptions appear
07:00–07:30	Loan defaults, late fees, delinquency digest	Review digest if sent
08:00	Bank auto-match	Review unmatched lines in Bank clearing

Jobs UI: Audit & System → Jobs — re-run any command; history shows success/failure.

Slide 2 — Three things that look similar

Name	Where to see it	What it means
Reconciliation queue	Finance → Reconciliation	Fix these — live problems
Daily/monthly snapshot	Reconciliation → Snapshots	Audit history for accountants
Bank clearing queue	Finance → Bank clearing	Uncleared deposits/cash-outs + unmatched imports

Operations (accept deposit, apply contribution) post to the ledger **immediately**. Reconciliation **checks** the books later — it does not replace your accept/match actions.

Slide 3 — Monthly collection calendar

Day	System does
1st	Opens contribution cycle; sends due notifications
5th	Batch-applies contributions (debits cash, credits fund)
6th	Batch EMI repayments; closes collection windows (overdue)
3rd	Generates member statements

Important: Members can still be collected **before** Day 5 when cash arrives (deposit accept, bank import post-to-member) — the scheduler is a backstop, not the only collection path.

Slide 4 — Batch posting halt (when automation stops)

If master pool is critically broken, the system **halts** these jobs:

- Contribution init / apply / close window
- EMI apply / close window
- Late fees
- Bank auto-match

You can still: accept deposits, approve cash-outs, match bank lines manually, post corrections.

Recovery: Fix reconciliation exceptions (especially `MASTER_IMBALANCE_UNRESOLVED`) → re-run **Nightly reconciliation** from Jobs, or ask accountant to clear after verification.

Jobs page shows a **halt badge** with reason when active.

Slide 5 — Daily admin checklist (reconciliation-aware)

Task	Where	Tied to scheduler
Review reconciliation badge	Finance → Reconciliation	After 06:30 nightly batch
Clear bank queue	Finance → Bank clearing	After 08:00 auto-match
Accept deposits / cash-outs	Fund Postings / Cash-out	Posts ledger → realtime checks
Import bank CSV	Bank clearing	Feeds auto-match + manual match
Run job manually	Audit & System → Jobs	Same as cron; respects halt gate

Do not combine deposit Path A (fund posting accept) and Path B (bank import post-to-member) for the same money — double-count risk.
