

# Specification coverage audit

Cross-check of the three workflow specifications against the SaaS codebase (May 2026).

| Document                                               | Scope                                                           |
|--------------------------------------------------------|-----------------------------------------------------------------|
| <a href="#">fund_management_system_requirements.md</a> | Accounts, cycles, loans, migration, reconciliation, config      |
| <a href="#">collection_cycle_workflow.md</a>           | Monthly collection phases 1–5                                   |
| <a href="#">loan_lifecycle_workflows.md</a>            | Eligibility, queue, tiers, disbursement, repayment, delinquency |

**Verdict: Full functional parity** for normative workflow requirements. Remaining gaps are operational (host cron) or cosmetic deltas vs legacy PHP UI density.

## [fund\\_management\\_system\\_requirements.md](#)

| Section                         | Status      | Implementation                                                                                                        |
|---------------------------------|-------------|-----------------------------------------------------------------------------------------------------------------------|
| §1 Master / member accounts     | <b>Done</b> | <code>Account</code> , <code>AccountingService</code> , master invariants                                             |
| §1.3 Master invariant           | <b>Done</b> | <code>MasterAccountInvariantService</code> , <code>fund:assert-master-invariants</code>                               |
| §1.4 Funding paths              | <b>Done</b> | Bank import, fund postings, contributions                                                                             |
| §2 Collection cycle             | <b>Done</b> | <code>ContributionCycleService</code> , <code>init/close/late-fee</code> commands, <code>ContributionCyclePage</code> |
| §2.2 Member cycle states        | <b>Done</b> | Contribution + migration stub statuses                                                                                |
| §3 Loan lifecycle               | <b>Done</b> | <code>LoanService</code> , queue, disbursement, EMI, early settlement                                                 |
| §3.10 Guarantor / delinquency   | <b>Done</b> | <code>LoanDelinquencyService</code> , transfer, digest                                                                |
| §4 Migration                    | <b>Done</b> | Stubs, opening balances, settlement, partial clearance, <code>MigrationWorkflowPage</code>                            |
| §5 Reconciliation (all domains) | <b>Done</b> | <code>ReconciliationService</code> , Filament queue, corrections, custom journal                                      |
| §5.11 Nightly batch             | <b>Done</b> | <code>fund:nightly-reconciliation</code> , Jobs page                                                                  |
| §5.12 Real-time                 | <b>Done</b> | <code>TransactionObserver</code> , migration guard, balanced journal check                                            |
| §5.13 Member invariants         | <b>Done</b> | <code>MemberInvariantService</code> categorized formula                                                               |
| §6 Configurable parameters      | <b>Done</b> | Tenant Settings, <code>LoanSettings</code> , policy helpers                                                           |
| Appendix A journals             | <b>Done</b> | Posting services + manual composer                                                                                    |
| Appendix B statuses             | <b>Done</b> | Enums / model constants + UI labels                                                                                   |

## [collection\\_cycle\\_workflow.md](#)

| Phase                  | Status      | Implementation                        |
|------------------------|-------------|---------------------------------------|
| Phase 1 — Init (Day 1) | <b>Done</b> | <code>contributions:init-cycle</code> |

| Phase                       | Status      | Implementation                                                                                        |
|-----------------------------|-------------|-------------------------------------------------------------------------------------------------------|
| Phase 2 — Collection window | <b>Done</b> | Auto-debit, partial debit, deposit matching                                                           |
| Phase 3 — Grace & late fees | <b>Done</b> | <code>contributions:close-window</code> ,<br><code>contributions:apply-late-fees</code> , tier engine |
| Phase 4 — Settlement / bank | <b>Done</b> | Bank workspace, clearing, carry-forward                                                               |
| Phase 5 — Reporting / audit | <b>Done</b> | Collection summary export, <code>FundAuditLog</code> , cycle CSV                                      |
| Member status machine       | <b>Done</b> | Member + contribution statuses                                                                        |
| Configuration               | <b>Done</b> | <code>ContributionPolicySettings</code> , Settings page                                               |

## loan\_lifecycle\_workflows.md

| Section                       | Status      | Implementation                                                                        |
|-------------------------------|-------------|---------------------------------------------------------------------------------------|
| §1 Eligibility + overrides    | <b>Done</b> | <code>LoanEligibilityService</code> ,<br><code>LoanEligibilityOverrideResource</code> |
| §2 Submission & queue         | <b>Done</b> | <code>LoanResource</code> queue, emergency flag, FIFO                                 |
| §3 Fund tiers                 | <b>Done</b> | <code>FundTier</code> , allocation, over-commit recon                                 |
| §4 Approval & disbursement    | <b>Done</b> | Partial disbursement, bank payout,<br><code>partially_disbursed</code>                |
| §5 Schedule & grace           | <b>Done</b> | Installments, grace election, EMI window close                                        |
| §6 Early settlement           | <b>Done</b> | Full + partial settlement paths                                                       |
| §7 Guarantor escalation       | <b>Done</b> | Ladder, transfer, delinquency UI                                                      |
| §8 Contribution exemption     | <b>Done</b> | Active loan exemption in collection cycle                                             |
| Appendices (status, journals) | <b>Done</b> | <code>LoanUserFacingStage</code> , accounting postings                                |

## Non-spec items (closed May 2026)

| Item                         | Status                                                                                                                                  |
|------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------|
| Clickable insight KPIs       | <b>Done</b> — <code>InsightKpi</code> , tenant kpi strip links, <code>FundOverview</code> / <code>MyFundOverview</code> / central stats |
| Column manager on all tables | <b>Done</b> — global <code>Table::columnManager()</code> in <code>AppServiceProvider</code>                                             |
| Panel visual polish          | <b>Done</b> — tenant/member/central theme gradients + stat hover animations                                                             |
| Server cron documentation    | <b>Done</b> — callout on <b>Jobs &amp; commands</b> page                                                                                |

## Operator checklist

```
php artisan tenants:migrate --no-interaction
php artisan test --compact tests/Feature/Tenant/ComplianceLayerTest.php tests/Feature/Tenant/SpecClosures
vendor/bin/pint --dirty --format agent
```

Enable host cron: `* * * * * php artisan schedule:run` in each tenant app root.
