

Legacy FundFlow vs FundFlow SaaS — Comprehensive Comparison

Last updated: 2026-05-18

Audience: Product owners, fund operators, and engineering planning parity work.

1. Purpose and scope

This document compares the **legacy FundFlow** application (single-tenant mutual-fund operations tool) with **FundFlow SaaS** (this repository: multi-tenant Laravel 12 + Filament v5).

Sources used

Source	Role
Legacy behavior (inferred)	docs/prompts.txt, docs/loan-ux-and-workflow-recommendations.md, docs/fund-flow-implementation.md, docs/initial-design.md
SaaS implementation (verified)	app/Services/, app/Filament/, tests/Feature/, routes/console.php
Session status	docs/implementation-status.md, docs/member-portal.md, docs/loan-delinquency-workflow.md

Important: The legacy application source tree is **not** in this repository. Gaps marked “legacy (documented)” come from product prompts and comparison docs, not line-by-line diff of old PHP. Where SaaS code exists, status is based on current implementation and tests.

Status legend

Status	Meaning
Parity	Equivalent capability for typical fund operations
Partial	Core behavior exists; UX, coverage, or edge cases differ
New	SaaS-only (not in legacy scope)
Missing	Documented legacy expectation not implemented or only stubbed
Deferred	Intentionally simplified vs legacy (documented recommendation)

2. Executive summary

What SaaS does well

- **Correct multi-leg accounting** for bank import → mirror → post → contribution → loan disburse/payout/repay, with strong automated tests.
- **Multi-tenancy** (database-per-tenant, central billing, plans/subscriptions).
- **Modern admin UX:** insights widgets on many resources, delinquency workspace, loan cluster, membership wizard, tenant dashboard.

- **Member portal** at `/member` with deposits, loans, calculator, guaranteed loans, messages, statements, early payoff, and open-period repayment.
- **Operational automation:** scheduled contribution apply/notify, loan due notifications, auto-repayment job, delinquency checks, statement generation, SMS/WhatsApp hooks.

Where legacy still “feels” ahead

- **Daily operator muscle memory:** loan queue as the primary home, installment grid as the source of truth, tier buckets, and dense legacy repayment rows wired to cron.
- **Visual richness:** legacy dashboards/widgets were tuned for heavy gradient/analytics presentation (`prompts.txt` #34); SaaS dashboards are functional but less visually ambitious.
- **Reporting:** neither project has a full analytics suite; legacy may have had more ad-hoc exports/operator views not yet recreated.
- **Uniform table polish:** prompts asked for count/sum/average footers, clickable stats everywhere, column manager on all tables, and insights on every page — **partially** applied in SaaS.

Bottom-line assessment

SaaS has **caught up or exceeded legacy** on fund-flow correctness, loans (including tiers, partial disbursement, delinquency, guarantors), deposits, membership, and member self-service. Remaining work is mostly **UX parity, reporting, legacy data coexistence clarity** (installments vs “legacy repayments”), and **finishing global UI rules** from `prompts.txt` — not rebuilding core accounting.

3. Platform and architecture differences

Topic	Legacy FundFlow	FundFlow SaaS
Deployment	Single fund / single database	Multi-tenant; isolated DB per fund
Admin URL	(varies)	Tenant panel: <code>/admin</code> on tenant domain
Member URL	Often <code>/portal</code> in early docs	<code>/member</code> (<code>MemberPanelProvider</code>)
Central operator	N/A	<code>/admin</code> on central domain (tenants, plans, invoices)
Auth	Fund users	tenant guard; members cannot access admin panel
Branding	Legacy asset pack	Shared <code>FundflowBrand</code> ; per-tenant public settings (logo, fund name EN/AR)
Permissions	Fund-local roles	Filament Shield on central; tenant admin flag
Household login	Simpler or ad-hoc	New: profile picker, internal emails, separated dependents (<code>docs/household-members.md</code>)
PWA / offline	Unknown	Tenant shell: manifest, offline page (public routes)
Storage URLs	Old paths	tenant.storage-legacy redirect for old file URLs

Recommendation: Update `docs/initial-design.md` (`/portal` → `/member`, `/manage` → `/admin`) to avoid onboarding confusion.

4. Fund flow and accounting (core rules)

Reference: docs/prompts.txt items 1–9, docs/fund-flow-implementation.md.

Rule / flow	Legacy	SaaS	Status	Notes & recommendation
Bank CSV import	Yes	BankImportTemplate, templates in Settings → Bank Templates	Parity	Encoding, header row, one vs split amount columns, extra column keys, duplicate rules — implemented per prompts #2–4.
Duplicate detection	Template-driven	Hash + template duplicate rules	Parity	Verify production templates match each bank’s CSV.
Mirror import → master cash	Yes	FundFlowService:mirrorToCash()	Parity	Imported → mirrored.
Post to member cash	Yes	FundFlowService:postToMember()	Parity	Member suggestion service exists; confirm match UX on bank tables.
Contribution cycle day	Configurable	Settings → Contributions (cycle_start_day)	Parity	Default 6th.
One contribution/repayment per member per cycle	Yes	ContributionService	Parity	Enforced in service layer.
Contribution posting (cash → fund → master fund)	Yes	ContributionService::postToFund()	Parity	
Loan disburse (fund + member fund debit, member cash credit)	Yes	LoanLifecycleService / LoanLedgerService	Parity	“Adapted from legacy” in code comments.
Loan payout (member cash + master cash debit)	Yes	Payout action + ledger	Parity	UI labels still say “Disburse/Payout” in places — see loan UX.
Loan repayment via cycle	Yes	recordRepayment scheduled loans:apply-repayments	Parity	Plus member open-period and early settle.
Master fund / master cash balance rules	Yes	Accounting	Parity	
Member fund may go negative	Yes	Yes	Parity	
Single active loan	Yes	Enforced	Parity	
Master invest / expense / reserve accounts	Legacy ops	Master account types + header actions	Partial	Exists; operator training may differ from legacy screens.

5. Banking and deposits

5.1 Bank statements and transactions

Feature	Legacy	SaaS	Status	Recommendation
Import with template picker	Yes	Bank accounts → import header action	Parity	
Red debits / green credits	Yes	LedgerAmount + MoneyDisplay	Parity	Amounts show absolute value ; sign implied by color (prompt #24).
Transaction detail modal	Yes	ViewBankTransactionAction, ViewAccountTransactionAction	Partial	Present on bank + account RMs; audit every transaction table.
Click row → edit modal	Prompt #20	EditAccountTransactionAction on account tables; bank uses view modal	Partial	Align bank row click with account behavior if operators expect edit-on-click everywhere.
Reverse / split / delete	Yes	AccountingService + Filament actions	Parity	Tested for tenant account tables.
Manual credit/debit datetime	Prompt #19	Supported in manual adjustment actions	Parity	
Refund on member cash	Legacy header action	AccountTransaction refund	Parity	ManualAdjustmentHeaderActions
Bulk delete transactions	Prompt #22	Bulk delete on transaction toolbars	Parity	
Group by on bank txns	Yes	TableGrouping	Partial	groupByTransactions()
Ignore imported rows	Yes	Ignore action	Parity	
Clear member deposit vs import	Uncleared until matched	FundPostingService	Parity	clearTransaction

5.2 Member deposits (“posted funds”)

Feature	Legacy	SaaS	Status	Recommendation
Member submits deposit request	Yes	FundPostingService member Deposits resource	Parity	Renamed from “Posted Funds” / “Fund postings”.
Fields: date, amount, reference, attachment, notes	Yes	Create form + storage	Parity	

Feature	Legacy	SaaS	Status	Recommendation
Admin approve/reject	Yes	Fund postings (Deposits) list actions	Parity	
Admin notification on new request	Yes	NewFundPostingNotification	Parity	
Member notification on accept/reject	Yes	Accepted/reject notifications	Parity	
Credit master cash → member cash on accept	Yes	Service flow	Parity	
Uncleared until bank match	Yes	Cleared via import matching	Parity	Document operator SOP in fund onboarding.
Deposits page insights widget	Legacy reference (#35)	FundPostingInsightsWidget (tenant + member list)	Parity	
Member bulk deposit posting	Unknown	Single create per request	Partial	Add bulk submit only if legacy had true bulk upload.

6. Contributions and cycles

Feature	Legacy	SaaS	Status	Recommendation
Contribution list / create	Yes	ContributionPage	Parity	
Contribution cycle UI	Yes	ContributionCyclePage (hidden nav; linked from contributions/dashboard)	Parity	Consider nav entry or dashboard CTA if operators cannot find it.
Bulk apply for open period	Yes	Cycle page bulk actions	Parity	
Scheduled notify + apply	Yes	contributions:notify, contributions:apply	Parity	Confirm cron on production.
Contribution insights widget	Yes	ContributionInsightsWidget	Parity	
Late contribution fees	Legacy	LateFeeService + delinquency arrears tab	Parity	
Auto-allocate contribution to loan	Legacy flag	Setting auto_allocate_loan_repayment + ContributionService hook	Parity	Off by default; enable per fund policy.

Feature	Legacy	SaaS	Status	Recommendation
Dependent contributions via parent	Yes	Household + parent member	Partial	SaaS household model is richer but different; train admins on <code>docs/household-members.md</code> .
Full legacy “contributions flow” UX	Rich	Functional	Partial	Prompt #31 — audit operator steps vs legacy checklist (export, filters, shortcuts).

7. Loans

7.1 Configuration and structure

Feature	Legacy	SaaS	Status	Recommendation
Loan settings (eligibility, terms, grace)	Many keys	Settings → Loans (<code>LoanSettings</code>)	Partial	Fewer knobs than legacy; add only if bylaws require.
Loan tiers	Yes	<code>LoanTierResource</code>	Parity	
Fund tiers + declared pool	Yes	<code>FundTierResource</code> + partial disburse when over pool	Parity	
Queue ordering / resequence	Yes	<code>LoanQueueOrderingService</code> , bulk/row resequence actions	Parity	
Emergency loans	Yes	<code>is_emergency</code> , emergency fund tier	Parity	
Loan queue page	Primary workspace	Loans cluster → Queue + tabs	Parity	Old <code>LoanQueue</code> page is a redirect stub.
CSV loan import	Legacy	Not found	Missing	Low priority unless migration needs it; prefer apply + queue.

7.2 Lifecycle and accounting

Feature	Legacy	SaaS	Status	Recommendation
Apply (member)	Yes	Wizard: Amount → Purpose → Witnesses → Review	Parity	Guarantor when amount > fund balance (setting).
Apply (admin)	Yes	Create / actions	Parity	
Approve / reject / cancel	Yes	<code>LoanFilamentActions</code>	Parity	

Feature	Legacy	SaaS	Status	Recommendation
Partial disbursement	Yes	disbursePartial disburse- ments RM, notifications	Parity	
Full disburse + payout steps	Yes	Disburse + payout actions	Parity	Rename UI to “Allocate to ledger” / “Send to bank” per <code>loan-ux-and-workflow-recommendations.md</code> .
Installment schedule	Core in legacy	LoanInstallment model + installments RM	Partial	Generated/maintained; member schedule display may be thinner than legacy grid.
Legacy repayment rows	Primary in old app	Repayments RM titled “Legacy re- payments”	Partial	Keep for historical data; document which report is authoritative (installments vs legacy rows).
Record repayment (admin)	Yes	Actions on loan view	Parity	
Early payoff	Yes	LoanEarlySettle member + admin actions	Parity	Service,
Open-period repayment (member)	Yes	Pay this period	Parity	
Partial settlement (installment-level)	Legacy	Unclear as dedicated UI	Partial	Map legacy “partial settlement” to installment payments; add explicit action if operators need it.
Auto repayment from cash (scheduled)	Yes	loans:apply-repayments	Parity	
Single active loan	Yes	Enforced	Parity	

7.3 Guarantors, delinquency, fees

Feature	Legacy	SaaS	Status	Recommendation
Guarantor on apply	Yes	Required above fund balance (config- urable)	Parity	
Guaranteed loans (member view)	Yes	MyGuaranteedLoanResource	Parity	
Guarantor notification on apply	Yes	GuarantorLoanApplication	Parity	Notification
Late fees on installments	Yes	LateFeeService overdue marking	Parity	
Delinquency tracking	Yes	LoanDelinquencyService, daily job	Parity	

Feature	Legacy	SaaS	Status	Recommendation
Transfer liability to guarantor	Yes	Admin actions + <code>guarantor_liability_transferred_at</code>	Parity	
Restore borrower liability	Yes	Admin action	Parity	
Delinquency workspace (3 tabs)	Ad-hoc in legacy	Loans → Delinquency	New / better	Overdue installments, contribution arrears, guarantor exposure.
Admin delinquency digest	Email/digest	<code>delinquency_digest</code> + mail channel	Parity	
Member arrears banner	Unknown	<code>MemberArrears</code> on member dashboard	New	

7.4 Loan UX and notifications

Feature	Legacy	SaaS	Status	Recommendation
Horizontal loan stepper on view	Requested (#30)	In <code>LoanViewInsights</code> via <code>LoanUserFacingStage::stepperFor()</code>	Partial	Stepper in widget , not always primary page chrome; promote to hero/stepper section on view.
User-facing stage labels	Mixed	<code>LoanUserFacingStage</code> enum	Partial	Enforce on list badges, emails, and member portal consistently.
Loan insights (portfolio, queue, tiers, detail)	Rich widgets	<code>LoanInsights</code> + widgets	Parity	Polling removed after bug — do not re-enable without stable context.
Member loan calculator	Yes	<code>LoanCalculator</code> page	Parity	
State-change notifications	Many	15+ notification classes (submitted, approved, rejected, disbursed, partial, repayment, default, guarantor, early settle, etc.)	Parity	Add SMS/WhatsApp only when Twilio configured.
Queue tabs (needs decision / ready / awaiting payout)	Implicit	Queue list + filters	Partial	Add explicit tabs per Phase A in loan UX doc.
Loan view as “command center”	Yes	View + header actions + RMs	Partial	Reduce reliance on crowded action dropdowns.

8. Members and membership

Feature	Legacy	SaaS	Status	Recommendation
Member CRUD	Yes	MemberResource (edit-centric)	Partial	No dedicated view page — insights on edit instead.
Member insights on profile	Yes	MemberDetailsWidget	Parity	
Accounts RM (cash / fund / loans tabs)	Yes	Relation manager + tabbed transactions	Parity	Prompt #13 — three transaction tabs.
Dependents / household	Yes	DependentsRelationManager, household services	New	See household doc; legacy data may need migration cleanup.
Admin impersonation of member	Unknown	Impersonation service + topbar hook	New	
Membership applications	Yes	Resource + approval service	Parity	
Public multi-step enrollment	Landing section	/membership, /apply wizard + status page	Parity	Prompt #14 — dedicated membership routes.
Public settings (cap, fees, documents)	Yes	Settings → Public page	Parity	
Application import (CSV/Excel)	Yes	MembershipApplicationImportService	Parity	
Application insights + stepper	Yes	MembershipApplicationInsightsWidget	Parity	
Member number rules	Yes	Settings → General	Parity	
Messages admin member	Unknown	MessagesRelationManager + MyMessageResource	New	
Full legacy member management parity	Yes	—	Partial	Prompt #31 — field-level audit (documents, custom fields, reports).

9. Member portal

Area	Legacy (typical)	SaaS (/member)	Status	Recommendation
Dashboard / greeting	Profile card	<code>portal-greeting-hero</code> + insights KPIs	Partial	Functional; less gradient-heavy than legacy prompt #34 vision.
My accounts	Read-only	<code>MyAccountResource</code>	Parity	
Contributions	View	<code>MyContributionResource</code>	Parity	
Deposits	Submit + track	<code>MyFundPostingResource</code>	Parity	
Loans + apply	Yes	<code>MyLoanResource</code> , <code>ApplyForLoan</code>	Parity	
Guaranteed loans	Yes	<code>MyGuaranteedLoanResource</code>	Parity	
Calculator	Yes	<code>LoanCalculator</code>	Parity	
Statements	PDF/list	<code>MyStatementResource</code> + route	Parity	
Messages	Unknown	<code>MyMessageResource</code>	New	
Profile edit	Yes	User menu profile pages	Parity	
Fund name in header	—	Topbar hook (<code>topbar-fund-name</code>)	New	Requires production credentials.
SMS/WhatsApp alerts	Unknown	Twilio settings + channels	Partial	
Cannot access admin	Yes	<code>canAccessPanel()</code>	Parity	

10. Monthly statements

Feature	Legacy	SaaS	Status	Recommendation
Generate statements	Yes	<code>MonthlyStatementService</code> , <code>statements:generate</code>	Partial	
Member PDF/view	Yes	<code>Member</code> resource + download route	Parity	
Notify members	Yes	<code>MonthlyStatementNotification</code>	Partial	
Admin statements list	Yes	<code>MonthlyStatementResource</code>	Partial	
Statement insights widget	Legacy	<code>MonthlyStatementInsightsWidget</code>	Partial	Compare PDF template with legacy if members complain.
Legacy statement layout parity	Exact PDF	May differ	Partial	

11. Notifications and messaging

Channel	Legacy	SaaS	Status
Database (in-app)	Yes	Tenant + member panels	Parity
Mail	Yes	Used for digest, statements, etc.	Parity
SMS	Likely	Twilio SmsChannel	Partial (config-dependent)
WhatsApp	Likely	Twilio WhatsAppChannel	Partial (config-dependent)

SaaS notification types (tenant): new fund posting, fund posting accepted/rejected, contribution due, monthly statement, loan submitted/approved/rejected/disbursed/partial/repayment/due/default/guarantor/early settled/settled, delinquency digest, new loan application, guarantor application.

Gap: No automated test matrix for every notification; production Twilio and cron must be verified.

12. Central SaaS platform (no legacy equivalent)

Feature	Status
Tenant provisioning / deletion	New
Plans, subscriptions, invoices	New
Purchase plan flow	New
Central admin (Rose theme)	New
Filament Shield RBAC	New

13. Reporting and analytics

Feature	Legacy	SaaS	Status	Recommendation
Dedicated reports module	Likely partial	Not found	Missing	Define MVP: trial balance, member statement export, loan portfolio CSV.
Dashboard charts/gauges	Rich	TenantDashboard (gauges, charts, quick actions)	Partial	Prompt #34 — more animation/gradient if desired.
Sparkline on member dashboard	—	Contribution sparkline in insights	Partial	
Export per table	Unknown	Filament export on some resources	Partial	Inventory per resource.

14. Global UI / UX rules (prompts.txt #5–28, #34)

Rule	Requested	SaaS	Status	Recommendation
Bilingual UI	All literals	lang/ar.json, translateLabel(), __()	Partial	Ongoing; audit new strings.
Panel theming (green/blue/red)	Member / admin / central	Emerald / Sky / Rose	Parity	
Table footer count + sum + average	All three	Sum only on qualifying columns (TableSummaryFooter)	Partial	Add Count/Average summarizers where prompts require.
Mobile-first tables	Yes	Global column defaults in AppServiceProvider	Parity	
Striped tables	Yes	Global striped()	Parity	
Header label capitalize first letter	Yes	CapitalizesTableColumnHeaderLabel	Parity	
Debits red, no minus sign	Yes	MoneyDisplay	Parity	
Transaction click → details	Modal	View actions on bank/account	Partial	Extend to any remaining tables.
Row click → edit transaction	Yes	Edit action on account transactions	Partial	
Grouped row actions	Yes	Workspace rule + TableRecordActionGroups	Partial	Audit tables not yet compliant.
Bulk actions mirror row actions	Yes	Many tables	Partial	Per-resource audit.
Group by	Appropriate tables	TableGrouping presets	Partial	Not on every table.
Column manager	All tables	Loans cluster + some member loan tables	Partial	Roll out or document exceptions.
Clickable stat cards	Yes	Tenant dashboard quick actions; FundOverview URLs	Partial	Extend to all stat widgets.

Rule	Requested	SaaS	Status	Recommendation
Insights widgets on all major pages	Yes	Many, not all	Partial	Accounts OK; check remaining list pages.
Compact combined stats	Yes	Insights pattern	Partial	
Beautiful gradients everywhere	Yes	Reverted on member dashboard; subtle on some cards	Partial	Product decision: subtle (tenant-style) vs legacy vivid.
Advanced tenant dashboard (#34)	Yes	TenantDashboard	Partial	Functional; not as visually dense as prompt vision.

15. Scheduled automation

Job	Schedule	Purpose
contributions:notify	Monthly 1st 09:00	Contribution due reminders
contributions:apply	Monthly 5th 09:00	Apply contributions
statements:generate	Monthly 3rd 08:00	Statements
--notify		
loans:send-due-notify	Monthly 1st 08:00	Repayment due
loans:apply-repayments	Monthly 6th 06:00	Auto loan repayment from cash
loans:check-defaults	Daily 07:00	Delinquency
delinquency:send-digest	Daily 07:30	Admin digest

Recommendation: Document tenant timezone and verify cron in staging/production (called out in `implementation-status.md`).

16. Data model and technical coexistence

Topic	Legacy	SaaS	Impact
Installments vs repayments	Single model	<code>loan_installments</code> + <code>loan_repayments</code> (legacy rows)	Operators may see duplicate concepts — document in admin help.
Loan schema migration	—	<code>upgrade_loans_to_legacy_full_schema</code> migration	May affect path for legacy-shaped data.
<code>fund_name</code> setting	Single field	Split <code>fund_name_en</code> / <code>fund_name_ar</code> with read migration	Parity with upgrade path.
Public storage paths	Old URLs	Legacy redirect route	Parity

17. Small but notable differences

Item	Detail
Navigation label Deposits	Replaces “Posted Funds” / “Fund postings” — same entity, new label.
Tenant admin path	/admin (not /manage from early design doc).
Member path	/member (not /portal).
Repayments RM title	Explicitly “ Legacy repayments ” to avoid confusion with installment schedule.
Loan insights polling	Removed to fix context bug; optional re-enable only with stable route context.
implementation-status.md summary table	Stale on delinquency email/filter — code has mail + member filter.
No TODO in app/	Backlog lives in docs, not code markers.

18. Overall assessment

Maturity by domain

Domain	Maturity vs legacy	Comment
Core accounting & fund flow	High	SaaS is the source of truth; well tested.
Banking & imports	High	Templates match modern requirements.
Deposits	High	End-to-end with notifications.
Contributions	Medium–High	Cycle page discoverability is the main UX gap.
Loans	High	Feature-complete; UX storytelling still catching up.
Delinquency	High	Exceeds typical legacy with dedicated workspace.
Member portal	Medium–High	Broad coverage; dashboard polish optional.
Membership / public Reporting	High Low	Wizard + settings. Both weak; SaaS has not closed gap.
Global table/UI rules	Medium	Foundations global; prompts #7, #15, #16–17, #27–28 uneven.

Strategic recommendation

1. **Do not rebuild legacy accounting** — invest in clarity (labels, stepper, queue tabs, help text for installments vs legacy repayments).

2. **Treat `prompts.txt` as a backlog**, not a failure list — many items are done; use this document for what remains.
3. **Prioritize operator efficiency** over visual effects unless stakeholders reaffirm prompt #34 gradient scope.
4. **Add a minimal reports/export milestone** if legacy operators relied on spreadsheets.
5. **Production hardening**: cron, Twilio, `view:clear` on deploy, tenant migration for household/loan schema.

19. Recommended accommodation roadmap

Phase 1 — Clarity and operator UX (2–4 weeks)

- ☐ Loan view: primary **stepper** + single “next action” (not only inside insights widget).
- ☐ Loan queue: explicit **tabs** (pending / approved / awaiting payout / repaying).
- ☐ Rename disburse/payout actions to **Allocate to ledger** / **Send to bank** (EN + AR).
- ☐ Admin doc: **installments vs legacy repayments** and which drives balance.
- ☐ Contribution cycle: clearer **navigation** from dashboard and contributions list.
- ☐ Update **initial-design.md** paths (`/member`, `/admin`).

Phase 2 — Global UI parity (2–3 weeks)

- ☐ Table footers: add **Count** and **Average** where `prompts.txt` #7 requires (keep Sum).
- ☐ Audit **row action groups** + **bulk** on all tenant/member tables.
- ☐ Audit **transaction modals** on every transaction grid.
- ☐ Optional **column manager** on high-traffic non-loan tables (members, contributions, deposits).

Phase 3 — Reporting (4+ weeks)

- ☐ Define report pack with fund treasurer: portfolio, arrears, cash reconciliation, member activity.
- ☐ Implement exports or Filament report pages; reuse existing services (`LoanInsightsService`, `LoanDelinquencyService`, etc.).

Phase 4 — Optional legacy depth (only if bylaws require)

- ☐ CSV loan import.
- ☐ Deeper partial-settlement UI per installment.
- ☐ Extra loan settings keys (grace variants, tier caps) from legacy.
- ☐ Richer dashboard animations/gradients (product decision).

Phase 5 — Production and migration

- ☐ Cron checklist per tenant.
- ☐ Twilio smoke test for SMS/WhatsApp.
- ☐ Legacy data migration runbook (`tenants:migrate`, household backfill per `household-members.md`).

20. Appendix A — SaaS feature inventory (quick reference)

Tenant panel resources: Members, Applications, Contributions, Deposits, Monthly statements, Loans cluster (loans, queue, tiers, delinquency), Bank accounts, Master accounts, Member accounts.

Member panel: Dashboard, My accounts, Contributions, Deposits, Loans, Guaranteed loans, Statements, Messages, Calculator, Profile.

Central panel: Tenants, Plans, Subscriptions, Invoices, Purchase plan.

Key services: AccountingService, FundFlowService, BankImportService, FundPostingService, ContributionService, ContributionCycleService, LoanService + App\Services\Loans*, MonthlyStatementService, MembershipEnrollmentService, MemberPortalInsightsService, TenantDashboardService, LoanDelinquencyService, TwilioMessagingService.

21. Appendix B — Related documentation

Document	Use
prompts.txt	Original product requirements (legacy parity + SaaS rules)
implementation-status.md	Recent loan/delinquency/dashboard completion status
loan-ux-and-workflow-recommendations.md	Loan UX gap analysis
loan-delinquency-workflow.md	Delinquency technical design
member-portal.md	Member portal architecture
fund-flow-implementation.md	Accounting lifecycle
household-members.md	Household vs legacy dependents

This document should be updated when major legacy-parity work ships or when legacy operators provide a concrete feature checklist from the old application.
