

Member status & membership lifecycle specification

Version: 1.0

Status: Approved for implementation

Scope: Tenant member **status**, contribution-cycle flag, member requests, admin workflows, portal gating.

1. Canonical statuses

Status	Code	Meaning
Active	active	Normal operating membership.
Inactive	inactive	Paused membership (member-requested freeze or admin freeze). Still a member; balances preserved; not exited.
Delinquent	delinquent	Compliance hold — arrears breach (contributions and/or loan installments).
Suspended	suspended	Administrative or loan-consequence hold (disciplinary, post-guarantor-transfer restriction).
Withdrawn	withdrawn	Voluntary exit from the fund. Settlement may proceed; not a hard payout freeze.
Terminated	terminated	Involuntary exit — hard payout freeze until admin review.

inactive is **distinct from withdrawn**: inactive = temporary pause; withdrawn = left the fund voluntarily.

Dashboard aggregates

Label	Includes
Non-active (insights)	inactive , delinquent , suspended , withdrawn , terminated
Exit states	withdrawn , terminated
Compliance holds	delinquent , suspended

2. Separate flag: `contribution_cycles_active`

Column	Type	Default	Purpose
<code>contribution_cycles_active</code>	boolean	true	When true , member remains in automatic contribution cycles even while suspended .

Use case: After a loan is transferred to a guarantor, the original borrower is **suspended** (portal blocked, no new loans) but **must still contribute**. Set `contribution_cycles_active = true` on transfer.

Rules:

- Admin **Suspend** → sets `contribution_cycles_active = false`.
- **Guarantor transfer** → `status = suspended, contribution_cycles_active = true`.
- **Restore suspended** → `status = active or delinquent (see §5), contribution_cycles_active = true`.
- **Inactive / withdrawn / terminated** → `contribution_cycles_active = false`.

3. Capability matrix (target behaviour)

Capability	Active	Inactive	Delinquent	Suspended	Suspended + cycles flag	Withdrawn	Terminated
Member portal Apply for loan Auto con- tribution cycles Admin: Con- tribute Admin: Repay- ment Admin: Adjust cash/fund Member: cash-out request Payout / settlement Be guarantor Household parent (new deps)	*						
						†	‡
							‡
	*						

* Subject to fund rules, balances, tenure, etc.

† Withdrawal settlement during exit workflow.

‡ Terminated = hard payout freeze until admin **releases payout review** or **reinstates**.

4. State machine

stateDiagram-v2

[*] --> active: Enroll / approve application

active --> inactive: Freeze (member request approved or admin)

inactive --> active: Unfreeze (request approved or admin)

```

active --> delinquent: Arrears breach (auto/manual)
delinquent --> active: Arrears cleared (auto/restore)
delinquent --> active: Force restore (admin)

active --> suspended: Admin suspend
delinquent --> suspended: Admin suspend
suspended --> active: Restore (no arrears)
suspended --> delinquent: Restore (arrears remain)

active --> withdrawn: Withdraw request approved / admin
inactive --> withdrawn: Admin withdraw
delinquent --> withdrawn: Admin withdraw
suspended --> withdrawn: Admin withdraw

active --> terminated: Admin terminate
inactive --> terminated: Admin terminate
delinquent --> terminated: Admin terminate
suspended --> terminated: Admin terminate

withdrawn --> active: Reinstate (balances cleared)
terminated --> active: Reinstate (balances cleared + payout unfrozen)

note right of suspended
  Guarantor transfer:
    suspended + contribution_cycles_active=true
end note

```

Forbidden transitions (enforced in MemberStatusService)

- No transition **from** terminated except reinstate.
- No transition **from** withdrawn except reinstate or terminate.
- suspend blocked for withdrawn, terminated.
- freeze only from active or delinquent.
- terminate blocked when already terminated.

5. MemberStatusService API

Method	From	To	Side effects
freeze(Member, reason)	active, delinquent	inactive	contribution_cycles_active=false; audit MEMBER_FROZEN; revoke portal sessions
unfreeze(Member)	inactive	active or delinquent	If arrears → delinquent; else active; audit MEMBER_UNFROZEN
suspend(Member, reason)	not suspended/withdrawn/terminated	suspended	contribution_cycles_active=false; audit MEMBER_SUSPENDED
suspendForGuarantorTransfer(Member)	suspended	suspended	contribution_cycles_active=true; audit MEMBER_SUSPENDED_GUARANTOR_TRANSFER
restoreSuspended(Member)	suspended	active or delinquent	contribution_cycles_active=true; audit MEMBER_RESTORED

Method	From	To	Side effects
<code>withdraw(Member, reason)</code>	not withdrawn/terminated	withdrawn	<code>contribution_cycles_active=false</code> ; audit <code>MEMBER_WITHDRAWN</code>
<code>terminate(Member, reason)</code>	not terminated	terminated	<code>contribution_cycles_active=false</code> , <code>payout_frozen_at=now()</code> ; audit <code>MEMBER_TERMINATED</code>
<code>reinstate(Member, reason)</code>	withdrawn, terminated	active	Zero cash/fund via mirrored journal; clear <code>payout_frozen_at</code> ; audit <code>MEMBER_REINSTATED</code>
<code>releasePayoutReview(Member, reason)</code>	terminated	terminated	Clears <code>payout_frozen_at</code> only; allows settlement cash-out; audit <code>MEMBER_PAYOUT_RELEASED</code>

Delinquency sync remains in `LoanDelinquencyService` (`markMemberDelinquent`, `restoreMemberActive`, `syncMemberDelinquencyStatus*`).

6. Member requests (portal)

Type	Requester	On approve	On reject
<code>freeze_memberships</code>	Active member	<code>MemberStatusService::freeze()</code>	No change
<code>unfreeze_memberships</code>	Inactive member	<code>MemberStatusService::unfreeze()</code>	No change
<code>withdraw_memberships</code>	Active/inactive/delinquent/suspended member	<code>MemberStatusService::withdraw()</code>	No change

Validation:

- One pending request per type per member.
- Freeze: only **active** (not already delinquent/suspended — must resolve those first).
- Unfreeze: only **inactive**.
- Withdraw: not **withdrawn/terminated**; warn if active loan obligations.

7. Household rules

When a **parent** enters **inactive**, **withdrawn**, or **terminated**:

- **Dependents** are **portal-blocked** until admin resolves (reassign parent, withdraw dependents, or reinstate parent).
- Enforced in `HouseholdMemberService::memberCanAccessPortal()` and login picker.
- Admin UI: banner on parent record listing blocked dependents.

When parent is **suspended** or **delinquent**: existing rules apply (dependents with **active** status may still access if separated/direct login).

8. Admin UI grouping (`MemberFilamentActions`)

Group	Actions	Visibility summary
Treasury	Contribute, Repayment, Adjust cash, Adjust fund	Contribute:
Communicate	Message, Notification	<code>MemberMembershipPolicy::canAdminContribute()</code>
Membership	Application, Freeze , Unfreeze , Suspend, Restore suspended, Withdraw , Terminate, Reinstate , Release payout	Has <code>user_id</code> Per state machine
Compliance	Sync delinquency, Mark delinquent, Restore active, Annual sub, Admin override, Delete	Delinquency actions: <code>active/delinquent</code>

Critical improvement

- **Remove** editable `status` Select from `MemberForm`.
- Show **read-only** status badge + `status_reason` / `status_changed_at` if present.
- All status changes go through workflow actions + audit log.

List tabs (`MemberListTabService`)

Add: `inactive`, `withdrawn`, `terminated` tabs (keep `all`, `active`, `migration_pending`, `delinquent`, `suspended`).

9. `MemberMembershipPolicy` (central gating)

Single class used by portal, Filament, contribution cycles, cash-out, loan eligibility:

- `canAccessPortal(Member): bool`
- `canAccessPortalConsideringHousehold(Member): bool`
- `canApplyForLoan(Member): bool` — `status === active` only
- `canParticipateInContributionCycles(Member): bool`
- `canAdminContribute(Member): bool`
- `canRequestCashOut(Member): bool`
- `canReceivePayout(Member): bool` — false when `payout_frozen_at` set
- `canBeGuarantor(Member): bool` — `active` + no arrears
- `canAssignDependents(Member): bool` — parent `active` only

10. Reinstate — balance clearing

On `reinstate()`:

1. Post balancing journal entries to bring member **cash** and **fund** to **0.00** (with master pool mirrors per accounting rules).
2. Description: `Membership reinstatement - balance reset`.
3. Do **not** delete historical transactions.
4. Set `status = active`, clear `payout_frozen_at`, `contribution_cycles_active = true`.

11. Legacy import

LegacyMemberStatusMapper:

Legacy label	Maps to
inactive	inactive (no longer withdrawn)
/ resigned	withdrawn
	suspended
	delinquent
	terminated
/ continuing	active

12. Migration

-- members table

```
ALTER status ENUM add 'inactive' (order: active, inactive, delinquent, suspended, withdrawn, terminated)
ADD contribution_cycles_active BOOLEAN NOT NULL DEFAULT TRUE
ADD payout_frozen_at TIMESTAMP NULL
ADD status_reason VARCHAR(500) NULL
ADD status_changed_at TIMESTAMP NULL
```

13. Open item (default assumed)

Withdraw path: Member submits `withdraw_membership` request → admin approves → `withdrawn`. No self-service instant withdraw.

14. Test plan

- MemberMembershipPolicyTest — matrix per status + flag combinations
- MemberStatusServiceTest — transitions, forbidden paths, reinstate zeroing
- MemberRequestServiceTest — freeze / unfreeze / withdraw approve flows
- LoanGuarantorTransferServiceTest — suspended + `contribution_cycles_active`
- ContributionCycleServiceTest — delinquent + flagged suspended in cycles
- HouseholdMemberServiceTest — parent exit blocks dependents
- MemberCashOutServiceTest — terminated payout freeze
- Update MemberImportExportTest, MemberPortalTest, architecture tests as needed
