

Process and fund flow for the subscription fees lifecycle and its accounting treatments:

1. User Submit the application with the fees declaration + attachment of transfer receipt.
2. Admin examine the application and receipt.
3. Admin approves the application.
4. Subscription fees are credited to the master cash account (as subscription fees).
The transaction is marked as "Uncleared". The amount might be more than the needed for the required fees. Admin will not approve the application if fees are less.
5. The credit is also mirrored to the member's cash account, after the member has been approved.
6. The member's cash account is debited for the subscription fees amount and the master fee account is credited.
7. A bank statement is later upload into the master bank account.
8. The admin matches the transaction in the master bank account to the uncleared transaction posted earlier for the subscription fees.
9. When matched, the uncleared master cash account transaction for the subscription fees is cleared.
10. Any amount above the subscription fees is left in the member's cash account.

Implemented the subscription fees lifecycle end-to-end, aligned with your 10 steps and the same uncleared-bank pattern used for member fund postings.

Flow mapping

Step

Implementation

1 Applicant declares fees + receipt

Enrollment step 5: transfer date/amount/reference, required receipt upload

(`membership_fee_receipt_path`), min amount $\geq$ required fee

2 Admin reviews

Application edit: fee section + receipt viewer; insights flag transfer receipt on pending apps

3 Admin approves

Existing approve action (with validation errors surfaced in UI)

4 Credit master cash (subscription fees), uncleared

`MembershipSubscriptionFeeService::postOnApproval()` credits master cash for full declared transfer; creates uncleared `BankTransaction` linked to the application

5 Block approve if transfer < required

`assertCanApprove()` before member creation

6 Mirror to member cash

Full transfer mirrored to new member cash on approval

7 Allocate fee

`transfer()` member cash → master fees for required amount only

8 Bank statement import

Unchanged — standard bank import on master bank account

9 Match & clear

Existing Clear / Match on bank transactions (now includes

`membership_application_id` rows)

10 Excess stays in member cash

e.g. transfer 75, required 50 → member cash balance 25 after approval

Key files

- `app/Services/MembershipSubscriptionFeeService.php` — validation + posting logic
- `app/Services/MembershipApplicationApprovalService.php` — calls fee service on parent approval
- Migrations: `membership_fee_receipt_path`, `membership_fee_required_amount`, `bank_transactions.membership_application_id`
- Enrollment: `step-fees.blade.php`, wizard rules, `MembershipEnrollmentService`
- Admin: `MembershipApplicationForm`, approve error handling in table

Tests

`tests/Feature/Tenant/MembershipSubscriptionFeeServiceTest.php` (5 tests) – approval guards, balances, clearing, dependents skip fees.

Deploy: run `php artisan tenants:migrate` on each tenant database.

Example (transfer 75, required 50): master cash +75, master fees +50, member cash +25, bank line uncleared until matched to an imported statement line.

Updated so the transfer receipt is optional and approval no longer depends on it.

Changes

- Enrollment: Receipt upload is optional (`nullable` validation); label shows “(optional)”.
- Approval: Removed the block that required `membership_fee_receipt_path` before approve.
- Still required for fee applications: Transfer reference and transfer amount $\geq$ required subscription fee.
- Uncleared flow unchanged: On approve, master cash is credited, member cash is mirrored, fees are allocated, and the linked bank transaction stays uncleared until an admin matches it to an imported master bank line (Clear / Match).

Admins can approve without a receipt; bank reconciliation still clears the subscription-fee line when the real bank deposit is matched.
